

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 7, line 6, with the following rewritten paragraphs:

-- Figure 2 illustrates an architecture for allowing a packet switched session to be established between peer mobile terminals using SIP in accordance with the present invention;

Figure 4, illustrates certain function components involved in establishing a circuit-switched call between two user terminals, according to an embodiment of the present invention; and

Figures 5 and 6 illustrate signaling associated with the setting up of a session, extending at least in part over a circuit switched network, using a packet switched network to carry the set-up signaling according to an embodiment of the present invention. --
